## HOW it all began

The first railway line on the Isle of Wight opened in 1862, when Queen Victoria was still on the throne! Eventually, nearly every town and village on the Island was connected by a daily service of steam trains on a network of 55 miles of railway lines.

By 1966 most of these lines had closed and just the eight mile Ryde to Shanklin line was electrified and remained open.

All the old steam engines, carriages and wagons were broken up, except for the few precious items saved for preservation by the Isle of Wight Steam Railway, which re-opened just 1 1/2 miles of track between Havenstreet and Wootton in 1971. At that time there was just the platform and a small station building at Havenstreet, one steam engine and six carriages.

40 years on the line has tripled in length and is an award-winning living museum attracting over 110,000 visitors each year. There are now 11 steam locomotives, three diesel locos, a dozen carriages and four stations.

## RECYCLING

You could say all our Island Railways have been recycled!

All of our locomotives, carriages and stations were once headed for the scrap-heap, but were saved, rebuilt and restored to work again for the pleasure of our many visitors.
